

OpenMETRIC Bar Code Fonts

10/22/01

Included in licensed as well as evaluation versions of OpenMETRIC are six TrueType fonts that substantially enhance the ability of OpenMETRIC to support bar coding.

These fonts should be usable on all versions of Windows from 3.1 onward.

The six fonts are shipped in the \OMET\FONTS directory. DDS has licensed these fonts from Altek Instruments Ltd located in Walton-on-Thames, UK. DDS has the right to distribute these fonts with OpenMETRIC.

The fonts need to be embedded in an application or installed on each client machine. [NOTE: At the present time, OpenMETRIC does NOT embed these fonts.] Refer to README.TXT in \OMET\FONTS for installation instructions.

The six fonts are identified as follows:

Filename	Fontname	Description
ABC39120.TTF	ABC C39 Tall	Tall Bar code without text.
ABC39130.TTF	ABC C39 Medium	Medium height bar code without text
ABC39140.TTF	ABC C39 Regular/Short	Short/Regular sized bar code without text
ABC39170.TTF	ABC C39 Tall Text	Tall Bar code with text
ABC39180.TTF	ABC C39 Medium Text	Medium height bar code with text
ABC39190.TTF	ABC C39 Regular/Short Text	Short/Regular sized bar code with text

All fonts may be used for the 'Regular Code 39' or 'Extended Code 39' bar code symbologies.

For comprehensive information about these fonts, and bar coding in general, refer to the README.TXT identified above.

At the present time, the Template-driven Traveler is the only OpenMETRIC report that incorporates the use of these bar code fonts. Additional uses are planned for future releases.

SAMPLES:

“Diversified Data Systems” is displayed with each of these six bar code fonts below.
